### Measurement Analysis 1: Measurement Uncertainty and ...

The imperfection inherent in all measurements is called an uncertainty In the Physics 152 laboratory, we will write an uncertainty almost every time we make a measurement Our notation for measurements and their uncertainties takes the following form: (measured value  $\pm$  uncertainty) proper units where the  $\pm$  read 'plus or minus'

### Chapter 3 Measurements and Their Scientific Uncertainty

Measurements and Their Uncertainty OBJECTIVES: -Determine the number of significant figures in a measurement and in a calculated answer 5 Measurements Qualitative measurements are words, such as heavy or hot Quantitative measurements involve numbers (quantities), and depend on:  
1) The reliability of the measuring instrument

## Chapter 1: Measurement and Uncertainty

Uncertainty in Measurement • Scientists aim towards designing experiments that can give a “true value” from their measurements, but due to the limited precision in measuring devices, they often quote their results with some form of uncertainty • Uncertainties: “All scientific knowledge is uncertain When the scientist tells you he

an uncertainty of about 20%, but by timing several successive oscillations, we can do much better If we measure the time for five successive oscillations and get  $24.01 \pm s$ , what is the final answer (with an absolute uncertainty) for the period? What if we measure 20 oscillations and get a time of  $94.01 \pm s$ ?

### EXAMPLE EXERCISE 2.1 Uncertainty in Measurement

EXAMPLE EXERCISE 21 Uncertainty in Measurement Ruler A has an uncertainty of  $\pm 0.1$  cm, and Ruler B has an uncertainty of  $\pm 0.05$  cm Thus, (a) Ruler A can give the measurements 20 cm and 25 cm (b) Ruler B can give the measurements 33.5 cm and 35.0 cm Solution Which measurements are consistent with the metric rulers shown in Figure 22?

## CHAPTER 2: Reporting and Using Uncertainties

Another Way of Using the Fractional Uncertainty The most important application of fractional uncertainties involves their use in deriving the uncertainty of a measurement involving the product of two other measurements For example, linear momentum  $p$  is the product of mass  $m$  and velocity  $v$  If we measure the mass to some accuracy and then
